Welcome to EuroPython 2020!

Conference Setup

Schedule overview

Program

Keynote Speakers

Thursday, 09:10 CEST, in Room Microsoft
Siddha Ganju

Thursday, 18:00 CEST, in Room Microsoft
Naomi Ceder

Thursday, 21:20 CEST, in Room Microsoft
Jessica McKellar

Friday, 09:10 CEST, in Room Microsoft
Alejandro Saucedo

Friday, 18:00 CEST, in Room Microsoft
Guido van Rossum
Ready to build the platform of tomorrow right now?

We’re building the world’s most trusted information network for financial professionals. Our 6,000+ engineers, developers, and data scientists are dedicated to advancing and building new solutions and systems for the Bloomberg Terminal in order to solve complex, real-world problems.

bloomberg.com/careers

Architect on purpose.
Welcome to europython 2020!
We would like to welcome you to our 19th EuroPython conference, the highlight of the year for the European Python community. We hope you'll enjoy the keynotes, talks, sprints, and many other events we have planned for you!

EuroPython started in 2002 in Charleroi, Belgium, as the first completely community organized major Python conference, and has been touring Europe for 18 years now. We had stops in Gothenburg (Sweden), CERN (Switzerland), Vilnius (Lithuania), Birmingham (UK), Florence (Italy), Berlin (Germany), Bilbao (Basque Country, Spain), Rimini (Italy), Edinburgh (UK), Basel (Switzerland) and now online for 2020.

Over the years, the conference has grown from 240 attendees in 2002 to more than 1200 in the last few years. EuroPython has become a yearly fixture for many Python enthusiasts and professionals.

Like so many other organisations, we had to make the difficult decision of canceling this year’s in-person conference in Dublin due to COVID-19. However, now more than ever, we want to provide a platform for the community to come together and this will be our very first EuroPython 2020 Online conference. We hope to attract as many as 1,000 Python developers, students and enthusiasts from all over the world to celebrate our love for Python and the community.

As the conference grew both in size and importance, we needed to adapt the conference organization as well. To address this challenge, we have implemented a workgroup based management structure for EuroPython over the last couple of years. It has been well established and is working effectively. The main advantage is to have these workgroups persist from year to year. At the same time, the organization has been more open to volunteers from all over the world:

Everyone who would like to participate is welcome to join the EuroPython organizers. We appreciate every bit of help.[1]

You can find many of the organizers and volunteers, who worked on making EuroPython 2020 happen, on our Discord server. Their names are shown in yellow. If you meet them, please share a smile to show your support.

Enjoy,

The EuroPython Organizers
EuroPython Team -
https://ep2020.europython.eu/europython/team/
EuroPython Society -
http://www.europython-society.org/

Azure for Python Developers

Azure offers extensive services for Python developers including app hosting, storage, open-source databases like mySQL and PostgreSQL, and data science, machine learning, and AI. The Azure libraries (SDK) for Python helps developers be highly productive when using these services.

Get started at https://aka.ms/EuroPython2020Online
Python extension for Visual Studio Code

A Visual Studio Code extension with rich support for the Python language (for all actively supported versions of the language: 2.7, >=3.5), including features such as IntelliSense, linting, debugging, code navigation, code formatting, Jupyter notebook support, refactoring, variable explorer, test explorer, snippets, and more!

Get started at https://aka.ms/europython2020
Given that most of the work already put into EuroPython 2020 will have to be adapted or redone due to the nature of the new event, we are reaching out to our incredible community to make this happen.

We are seeking for people who are motivated to help and have experience using online conference tools. If that sounds like a task for you, please reach out to us at board@europython.eu.

We genuinely appreciate your collaboration.
Online Conference

Attending conference days (23rd & 24th July) will require a ticket, but the sprints (25th & 26th July) will be held on open rooms, free of charge. Speakers will not be charged to attend the conference.

Tools
Please check out the separate pages under Setup on our website regarding the Chat and Conference Systems we’re going to use for the online event.

- **Chat System** as central conference platform, with channels to enable interactivity and links to the conference system rooms. We will use Discord for this.
• **Conference System** for audio / video, Q&A, polls, etc. during talks. We will use Zoom and Jitsi for these.

---

**Hallway Track**
To enable interaction between attendees, we will have a hallway chat channel, as well as attendee run chats on our Discord server.

**Sponsor Exhibit**
The sponsor exhibit will be available as a web page on our website. Sponsor "booths" are run by the sponsors using a Zoom room and one or more chat channels each, where they
can present themselves, make contact, show demos or even run additional talks, training sessions, etc.

The exhibit will be available to sponsors for all four days.

Presentations

Presentations will take place in the following formats on the conference days (Thursday, July 23, and Friday, July 24).

Talks

Talks will be held in Zoom webinar tracks, with either 30 or 45 minute duration each. Q&A sessions will take place at the final 5 minutes of each meeting. Additionally, we are planning to use separate breakout chat channel where attendees can ask additional questions, similar to what we have at the in-person conference.

Posters

Posters will be collected into a gallery page, together with PDF versions of the documents. Poster sessions will then be held in Zoom rooms, so that the speakers can answer questions and present more details of their work using screensharing.

Lightning Talks

Lightning talks will be held in the plenary Zoom webinar track. The proposals will be collected on a Google Form that will be made available in our chat system on the day of the Lightning Talk session, similar to how we run this at the in-person event.

Open Space

We will have one or two Open Space tracks at the conference, where attendees can schedule their own sessions and then run them in Zoom rooms. We will set up a scheduling sheet on Google Drive to register sessions, which we will make available via a link in our chat system.

Sprints

Sprints will take place on Saturday, July 25, and Sunday, July 26. They are free to attend, but do require registration.

Each team will receive a Jitsi virtual room and a chat channel for collaboration. To submit a proposal, please follow the instructions on the Sprints page.

We will set up a scheduling sheet on Google Drive to register sessions.

Please follow the instructions on the Sprints page:

https://ep2020.europython.eu/events/sprints/
I love Python!

I’ve been a Python developer for 20 years and I’ve learned so much throughout these years thanks to the support I’ve found in our worldwide community. I’m excited about joining you at EuroPython 2020 (my first EuroPython!) where I’ll be speaking about using tech for good, specifically for Diabetes monitoring with Python!

I’d love to chat with you, I’ll be at the Vonage booth, where you can come say hello and learn more.

To stay in touch you can also follow us on Twitter, we're @VonageDev and on Twitch at twitch.tv/vonagedevs.

Diana Rodriguez
Python Developer Advocate

We look forward to meeting you at our booth!

08:00
Registration

09:00
Opening Session

09:10
Siddha Ganju (Nvidia)
Keynote: 30 Golden Rules of Deep Learning Performance

10:00
Elias Mistler (Previse)
How to write multi-paradigm code

Bhagvan Kommadi (Value Momentum)
Telehealth Platform: Python & Django powered

JunWei Song, KunYu Chen
So, You Want to Build an Anti-Virus Engine?

10:45
Coffee break

11:00
Neeraj Pandey (Ashoka University)
The Joy of Creating Art with Code.

Bojan Miletic (Softerrific)
Django Testing on Steroid: pytest + Hypothesis

Takuya Futatsugi
Bringing your Python script to more users!

11:30
Martin Christen (FHNW)
pyRT - Computer Graphics in Jupyter Notebooks for Fun and Teaching

Nisarg Shah
Developing GraphQL API in Django using Graphene

Leonardo Giordani (We Got POP Ltd)
Clean Architectures in Python

12:00
Bernat Gabor (Bloomberg LP)
Lessons from the Trenches: rewriting and re-releasing virtualenv

Miloslav Pojman (Akamai Technologies)
HTTP/3 – why should I care?

Nicholas Tollervey
How to Run a Corridor Track in a Remote Conference with Python

12:45
Lunch
July 23, 2020

Parrot [Data Science]

Tania Allard (Microsoft)
Docker and Python: making them play nicely and securely for Data Science and ML

Coffee break

10:45

11:00

Alexander Hendorf (Königsweg GmbH)
15 Things You Should Know About Spacy

Mattia Ferrini
Decision Science with Probabilistic Programming

Brilian Putra Amiruddin (Institut Teknologi Sepuluh Nopember)
Design and Simulate your Control Systems with Python, Why Not?

11:30

Naoise Holohan (IBM Research Europe)
Diffprivlib: Privacy-preserving machine learning with Scikit-learn

12:00

Eyal Trabelsi (Salesforce)
Practical Optimisation for Pandas

12:45

Lunch
13:15 | Microsoft
Miroslav Šedivý (solute GmbH)
Your Name Is Invalid!

13:45 | Brian
Yenny Cheung (Yelp)
Creating an inclusive team culture in times of change

14:15 | Ni
Ben Nuttall (BBC News Labs)
Tools for maintaining an open source Python project

13:15 | Ni
Philip Jones (Moneyed)
An ASGI Server from scratch

13:45 | Brian
Szymon Pyżalski (Egnyte)
Full Stack Type Safety

14:15 | Microsoft
Alexys Jacob (Numberly)
A deep dive and comparison of Python drivers for Cassandra and Scylla

15:00 | Coffee break

15:15 | Microsoft
Radosław Ganczarek (PGS Software S.A.)
The joy of deleting code

Siddha Ganju

30 Golden Rules of Deep Learning Performance

Thursday, 09:10 CEST, in Room Microsoft

“Watching paint dry is faster than training my deep learning model.”
“If only I had ten more GPUs, I could train my model in time.”
“I want to run my model on a cheap smartphone, but it’s probably too heavy and slow.”

If this sounds like you, then you might like this talk.

Exploring the landscape of training and inference, we cover a myriad of tricks that step-by-step improve the efficiency of most deep learning pipelines, reduce wasted hardware cycles, and make them cost-effective. We identify and fix inefficiencies across different parts of the pipeline, including data preparation, reading and augmentation, training, and inference.

With a data-driven approach and easy-to-replicate TensorFlow examples, finely tune the knobs of your deep learning pipeline to get the best out of your hardware. And with the money you save, demand a raise!

Naomi Ceder

Staying for the Community: Building Community in the face of Covid-19

Thursday, 18:00 CEST, in Room Microsoft
Python communities around the world, large and small are facing loss - from the loss of in person meetups and conferences to the loss of employment and even the potential loss of health and life. As communities we are all confronting uncertainty and unanswered questions. In this talk I would like to reflect on some of those questions. What are communities doing now to preserve a sense of community in the face of this crisis? What might we do and what options will we have for coming events? How can we build and foster community and still keep everyone safe? What challenges might we all face in the future? What sources of support can we find? What are our sources of optimism and hope?

About Naomi Ceder
Naomi Ceder earned a Ph.D in Classics several decades ago, but switched from ancient human languages to computer languages sometime in the last century. Since 2001, she has been learning, teaching, writing about, and using Python.

An elected fellow of the Python Software Foundation, Naomi currently serves as chair of its board of directors. She also speaks internationally about the Python community, and on inclusion and diversity in technology in general.

By day she leads a team of Python programmers for Dick Blick Art Materials, and in her spare time she enjoys sketching, knitting, and deep philosophical conversations with her dog.

Jessica McKellar
Python in Prison: how open source can change a criminal justice system

Thursday, 21:20 CEST, in Room Microsoft

The United States has the highest incarceration rate in the world, with over 2.2 million people behind bars in our prisons, jails, juvenile facilities, and detention centers.

The system is racist and ineffective, but how do we change something so big and so economically entrenched, especially as software engineers?

Let’s look at how Python classes in US prisons are transforming rehabilitation and re-entry, and talk about what we can do as individuals and as an open source community to dismantle an unjust system.

About Jessica McKellar
Jessica McKellar is a founder and the CTO of Pilot, a bookkeeping firm powered by software. Previously, she was a founder and the VP of Engineering for a real-time collaboration startup acquired by Dropbox, where she then served as a Director of Engineering. Before that, she was a computer nerd at MIT who joined her friends at Ksplice, a company building a service for rebootless kernel updates on Linux that was acquired by Oracle.
Jessica is a former Director for the Python Software Foundation and PyCon North America's Diversity Outreach Chair. For her outreach efforts in the Python community, she was awarded the O'Reilly Open Source Award.

Open source meets criminal justice reform in Jessica’s work with The Last Mile, a job training and re-entry program that has implemented the first computer programming curriculum inside US prisons. She teaches Python at San Quentin State Prison in California, hires formerly incarcerated software engineers, and uses that bridge between the tech industry and prisons to get people activated and acting for decarceration.

**Alejandro Saucedo**

**Meditations on First Deployment: A Practical Guide to Responsible Development**

*Friday, 09:10 CEST, in Room Microsoft*

As the impact of software increasingly reaches farther and wider, our professional responsibility as developers becomes more critical to society. The production systems we design, build and maintain often bring inherent adversities with complex technical, societal and even ethical challenges. The skillsets required to tackle these challenges require us to go beyond the algorithms, and require cross-functional collaboration that often goes beyond a single developer. In this talk we introduce intuitive and practical insights from a few of the core ethics themes in software including Privacy, Equity, Trust and Transparency. We cover their importance, the growing societal challenges, and how organisations such as The Institute for Ethical AI, The Linux Foundation, the Association for Computer Machinery, NumFocus, the IEEE and the Python Software Foundation are contributing to these critical themes through standards, policy advise and open source software initiatives. We finally will wrap up the talk with practical steps that any individual can take to get involved and contribute to some of these great open initiatives, and contribute to these critical ongoing discussions.

**About Alejandro Saucedo**

Alejandro is the Chief Scientist at the Institute for Ethical AI & Machine Learning, where he leads the development of industry standards on machine learning bias, adversarial attacks and differential privacy. Alejandro is also the Director of Machine Learning Engineering at Seldon Technologies, where he leads large scale projects implementing open source and enterprise infrastructure for Machine Learning Orchestration and Explainability. With over 10 years of software development experience, Alejandro has held technical leadership positions across hyper-growth scale-ups and has delivered multi-national projects with top tier investment banks, magic circle law-firms and global insurance companies. He has a strong track record building cross-functional departments of software engineers from scratch, and leading the delivery of large-scale machine learning systems across the financial,
insurance, legal, transport, manufacturing and construction sectors (in Europe, US and Latin America).

**Talks**

EuroPython 2020 gives you access to more than 110 sessions throughout the 2 days of the conference. We have included the schedule in this booklet, but changes after publication are still possible.

Please see our website or the conference app for the full up to date schedule, including session descriptions.

**Data Science Track**

In recent years, data science has become a very important part of the Python's eco system. EuroPython has been dedicated to showcasing Python's use in data science for many years. This year, we have reserved two all day tracks to this topic.

**EuroPython meets Data Science**

We are happy to announce a complete data science track as part of the main EuroPython conference this year.

Many of the talks rely on projects which are funded by NumFocus. Please find more information and the mission of **NumFocus** supporting Open Source Software below.

---

**Guido van Rossum**

*Guido van Rossum Q&A*

Friday, 18:00 CEST, in Room Microsoft

In this session, you'll get a chance to get your questions answered by Guido van Rossum, our retired BDFL.

In order to submit a question, please use the following Google form: Guido van Rossum Q&A: Question Submission.

**About Guido van Rossum**

Guido van Rossum is Python's creator. He is Dutch, but lives in the San Francisco Bay Area. Until July 2018 he was Python's BDFL (Benevolent Dictator For Life), and he is still deeply involved in the Python community (especially in the area of language design). Until October 2019 he was a Principal Engineer at Dropbox. He is now retired. He loves parentheses.

**Website**: https://ethical.institute/
Optiver is a leading trading firm driven by technology. Our systems play an essential role in how we trade. Our Engineering Teams work closely with Trading to build and run reliable, high performance trading systems for a complex, continuously changing environment.

**OUR CHALLENGE**
Balancing complexity with system reliability and performance

**How we work:**
- Early detection of failures
- Software engineering that enables operational engineering
- Simple solutions
- One-to-one collaboration with end users

**JOB OPPORTUNITIES AT OPTIVER**
We offer challenging job opportunities in Amsterdam within our Infrastructure, Data Engineering and Application Engineering teams. We encourage to apply Engineers who are motivated to work with system reliability and complex, distributed systems at scale.
We will have two full day tracks featuring more than 18 talks and a keynote:

- Thursday and Friday in the Parrot room
- Keynote on Friday

### Poster sessions

Posters are a graphical way to describe a project or a technology, printed in large formats; posters are exhibited online at the conference, can be read at any time by participants, and can be discussed face to face with their authors during the poster sessions.

- Building a State-of-the-art Fraud Detection Framework by Albert Calvo
- Decision Science with Probabilistic Programming by Mattia Ferrini
- Design and Simulate your Control Systems with Python, Why Not? by Brilian Putra Amiruddin
- Developing a match-making algorithm between customers and Go-Jek products! by Gunjan Dewan
- Integration between ArcGIS Server (Rest API) and Django by Vinicius Cruvinel Rego
- Radio Astronomy with Python by Priscila Gutierres
- Reduce hardware costs in Internet of Things using Python by Vijay Sajjanar
- Resurrecting a django project in python 2.7 for 3.8 by Griffith Rees

### EuroPython sessions

The EuroPython sessions are intended for anyone interested in helping with the EuroPython organization in the coming years.

### EPS General Assembly

This is where the EuroPython Society (EPS) board gives its reports, resolutions are passed and the EPS members can vote in a new EPS board.

Please note: The General Assembly will be scheduled a few weeks after EuroPython 2020 and also held online. We will announce the General Assembly on the EPS blog.
EuroPython 2021: Help us build the next edition!

**Friday, 16:15 CEST, Room Ni**

We need help with organizing and running EuroPython 2021.

In this session, we will explain how the EuroPython workgroup model works and where you could help.
We love Python.

Build, deploy, and monitor your Python functions, apps, workloads, notebooks, and containers at scale.

Benefit from our AI and big data platforms to analyze and understand your data.

EuroPython Sprints

Most open source software development happens on the web and developers commonly only communicate online when working on projects. This usually works out fine, but the lack of live meetings can sometimes be a limiting factor in making good progress.

For this reason, a form of impromptu coding meetups called “sprints” or “hackathons” (outside the Python community, the term “hackathon” is more common) were initiated, where developers interested in a project can get together in person for a short period of time to make quick progress. Since conferences provide the perfect place to meet, sprints are made into part of the conference program.

EuroPython has had sprints ever since it started in 2002. This year in the online version, we will again have a sprint weekend, where developers can join to work on interesting things. It is also possible for people interested in a project to join in for the first time at a sprint. The setup and management of the sprints are solely up to the teams running the sprints.

We will have a sprint introduction session on Saturday morning at 09:00 CEST in Room Microsoft. If you want to join a sprint team, attending this session is a good idea.
Social Events

On Thursday, July 23, we will have a virtual social event, starting at 21:20 CEST.

On Friday, July 24, we’ll have an after party, starting at 21:30 CEST.

For both events, we are preparing a number of fun things to socialize virtually.
We’re building the world’s most trusted information network for financial professionals. Our 6,000+ engineers, developers, and data scientists are dedicated to advancing and building new solutions and systems for the Bloomberg Terminal in order to solve complex, real-world problems.

Code of Conduct

EuroPython is a diverse community who maintains a reputation as a friendly, welcoming, inspiring and dynamic group. We’d like to keep it that way, which is why we ask all participants, speakers, organizers and sponsors (collectively: the attendees) to follow this code of conduct (CoC).

If you have questions regarding this CoC, please see our CoC FAQ below or contact the EuroPython CoC WG. Your questions will only be seen by the members of the CoC workgroup and treated confidentially.

Be nice to each other

We trust that attendees will treat each other in a way that reflects the widely held view that diversity and friendliness are strengths of our community to be celebrated and fostered.

Furthermore, we believe attendees have a right to:
- be treated with courtesy, dignity and respect;
- be free from any form of discrimination, victimization, harassment or bullying;
- enjoy an environment free from unwelcome behavior, inappropriate language and unsuitable imagery.

Be professional and don’t spam

We consider EuroPython a great setting to showcase the work of the community and would like to encourage networking and business related discussions, as well as keep the conference presentations meaningful and interesting for everyone.

We therefore:
- only allow company marketing or recruiting related activities at the conference in accordance with our sponsor agreements;
- request presentations - outside the official recruiting sessions - to focus on Python related topics, not on recruitment.

The EuroPython Sponsor WG will be happy to answer any questions related to marketing or recruiting activities.

Solving problems

If problems covered by this code of conduct arise, please contact one of EuroPython CoC contacts listed below or any other EuroPython organizer directly and in private. Any complaint will remain confidential, be taken seriously, investigated, and dealt with appropriately.

The EuroPython organizers reserve the right to carry out any of the following actions relating to a complaint:
- The person concerned may be told to stop/modify his/her behavior appropriately and a warning will be issued.
- The person concerned may be warned that enforcement action may be taken if the behavior continues.
- The person concerned may be asked to leave the venue immediately and/or may be prohibited from continuing to attend EuroPython (without refund).
- The incident may be reported to the local authorities.
Contacts:

@coc@europython.eu - Emails to this address will be received by the EuroPython CoC Workgroup, which is in charge of CoC conflict management.

Code of Conduct FAQ

This FAQ is meant to clarify a few questions that may arise from reading our above Code of Conduct for the EuroPython conference.

Why did you add the “don’t spam” section to the CoC?
At previous EuroPython conferences we had a few issues with non-sponsor companies trying to sidestep our sponsorship packages by e.g. massively distributing flyers on conference tables, directly approaching attendees with calls to attend company presentations, or using lightning talks as free recruiting session.

It should be understood by attending companies, that marketing and promotional activities are only permitted in the context of our paid sponsor packages. Not following these guidelines is disrespectful of our attendees and paying sponsors.

To make this clear to everyone, we decided to add a new section to the CoC, starting with EuroPython 2016.

May I distribute flyers/stickers/etc at the in-person conference?
We will have a special table/area designated for distribution of flyers, stickers and other informational material, which can be used by all attendees (including employees of companies sponsoring or not sponsoring EuroPython) to place marketing material.

Unsolicited distribution of marketing material in other areas, e.g. on conference tables, in conference rooms, etc. is not permitted, unless authorized by the EuroPython Sponsors WG.

May I send private messages to attendees on the Discord chat system?
If you have their permission, that's absolutely no problem.

We do not want sponsors to contact attendees in a cold-call style to get their attention. It is better to first get their attention on one of the
public channels and then follow up with them using PMs for more details conversations.

As an attendee you may contact other attendees via private messages, if they have turned on permissions to allow such messages. If you do, please be aware that such direct contact may not be welcome and also consider that our Code of Conduct applies to such communications as well.

**Does the restriction of marketing/recruiting activities also apply to private discussions?** Absolutely not :-) Much to the contrary, we want to encourage such communication at the conference, including discussions related to business acquisition or recruiting offers.

The restriction does apply to unsolicited marketing or recruiting activities by non-sponsor companies, since this would sidestep our sponsoring activities and lower the value of our sponsoring packages. Without this restriction, we'd end up with fewer sponsors and a higher priced conference, which is not in our interest and also not in the interest of our many attendees.

**I have a question which is not answered in this FAQ**
Please contact the EuroPython CoC WG with any other questions you may have. Your questions will only be seen by the members of the CoC workgroup and treated confidentially.

### Contacts

**EuroPython Helpdesk**

If you have questions regarding EuroPython, your talk submissions, your tickets, etc. please contact the EuroPython Helpdesk at:

[@helpdesk@europython.eu](mailto:helpdesk@europython.eu)

Please see the [code of conduct page](https://europython.eu/coc) for CoC contact information.

For problems with the website we have an expert option available too: please report issues using the [github tracker for the site](https://github.com/europython/europython).

**EuroPython Sponsor Contact**

If you are interested in sponsoring EuroPython, please contact:

[@sponsoring@europython.eu](mailto:sponsoring@europython.eu)

The sponsoring team will then get in touch with you to discuss the possibilities and details.

**EuroPython Society**

The EuroPython Society board can be reached via one of the following addresses:

[@board@europython.eu](mailto:board@europython.eu)
[board@europython-society.org](mailto:board@europython-society.org)
